

# Surficial Geology

Figure 9

Surficial geologic map to the Sarasota, Florida study area. This map integrates the sidescan imagery, subbottom results, and surface sediment information to show the distribution of outcrops of or, the extent of Holocene siliciclastic sand, and the extent of Holocene aged shell hash. The crests of the ridges are also shown for reference.

-  One meter bathy
-  Ridge Crests
-  Miocene
-  Shell hash
-  Siliciclastic sand
-  Young hardground
